

“Endpoint Management and Protection” FREE Seminar

Endpoint protection is important to many businesses that use different kinds of devices to access a business network. Allowing the use of various mobile devices Windows devices, Mac OS devices, smartphones or tablets presents **a risk for companies because sensitive company data can end up being stored or displayed on these endpoints.**

In this seminar, HKPC will introduce the affordable & Best-in-class solution that enables organizations to identify malware and to minimize its negative effects on a network or on individual devices. In this event, you will learn how to:

- Handle malware
- Use AI for Endpoint Protection
- Prevent data lose by encrypting your data
- Protect your endpoint everywhere
